To Whom it May Concern;

This letter is in regards to the Open Household in Hondo, Tex. on June 12, 2003 concerning the proposed Rail Construction in Medina County. I see nothing wrong with the Construction of the Quarry and Rail Line because it will cause less Pollution, Noise, traffic and damages to the area than being overrun with subdivisons which is what is happening and people opposed to the railine cant or wont see.

Concerning the Historic Homes, Vulcan is already helping to preserve those close to the line, where as those who claim to be so worried about Vulcan, were No where to be seen or heard when dozens of them have been torn down in the last 25 years.

These same people talk about Vulcan polluting the Eduards Water, but say nothing about the thousands of Septic tank being installed in Subdivisons, wells being drilled and pumping out water, roads being built everywhere, people running up and down them day and Night, causing air, water, and noise pollution, this they dont say anything about, but have the gall to try and act so pious about a railine which will cause much less impact.

Thank You for your time
Marvin L. Nichols
